---

**SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT**

**MEMORANDUM**

**DATE:** August 4, 1983  
**TO:** All Technical Personnel  
**FROM:** Sanford M. Weiss, Director of Engineering /s/ SMW  
**SUBJECT:** Emission Reduction Credits

It has recently come to my attention that using emission reduction credits granted after January 1, 1983, are in a different category than heretofore supposed. Most of us have been under the impression that emission reductions that were banked after 1/1/83, and certified by the District could be used freely in all transactions. It has now come to my attention that Rule 1309(d) requires that the EPA allow shutdown credits. That has impacts on the use of any banked emissions which are certified under Rule 1309 because we could not allow such shutdown credits to be used for off site purposes. Contemporaneous reductions continue to be available for all transactions.
